

Packaging Suite

The eProductivity Software (ePS) Packaging Suite is a highly adaptable, modular solution designed specifically for label, folding carton, and flexible packaging (including film extruders) and is a complete end-to-end business management ecosystem for the packaging industry.

With over 30 years of development, the Packaging Suite is purposely designed to solve numerous challenges the industry has faced. As a result, we have created a market-leading solution that enables packaging manufacturers with:

- **Strengthened business continuity & resilience**
- **Improved quality & traceability**
- **Cross-business visibility**
- **Advanced capacity utilization**
- **Optimized inventory levels**
- **Increased overall cash flow**
- **Lowered transaction costs**

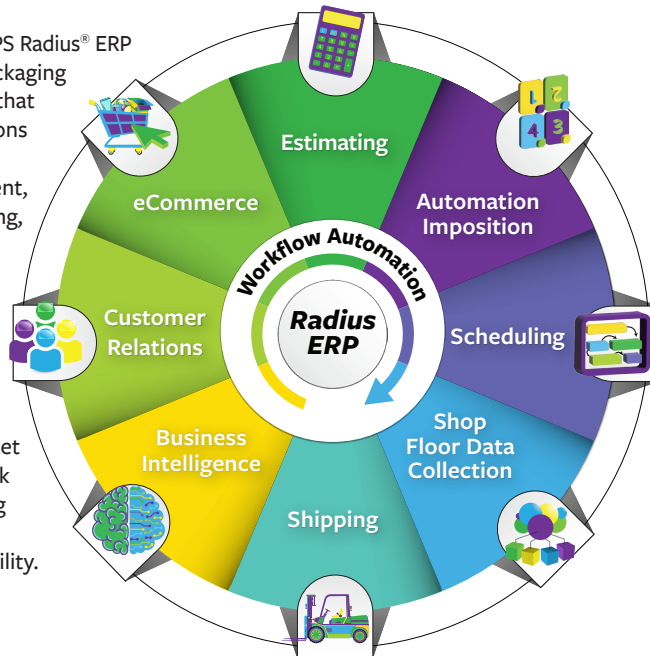

Enabling **Packaging** Success

Purpose-built packaging ERP technology created specifically to *maximize efficiency* and support *strategic decision-making*.

The Packaging Suite features ePS Radius® ERP at its heart, a future-proof packaging enterprise resource planning that provides core business functions such as costing, inventory information, order management, estimating, production planning, and scheduling.

Radius ERP can be extended with additional modules that enhance its functionality and further support business functions to ensure business continuity in challenging market conditions by maintaining peak productivity levels, maximizing business performance, and enabling enterprise-wide visibility.
